CP4907 Cajon La Perù EVO Burl

Our EVO models in the „La Perù" and „Precise OS" series set a benchmark in Cajon construction.

The „La Perù" EVO is made of solid, stained alder in the body, beech back and design veneer playing surface. The playing surface is half glued, half screwed for the typical La Perù bass. While the alder body amplifies the controlled basses, the 2x4 snare strings, which are fanned out on the back of the playing surface, produce the rich and ultra-precise snare sounds. Both snare string strands can be adjusted separately. These features together make the visually and technically impressive „La Perù" Evo Cajon an extremely versatile instrument, suitable for any style of music.

Details

Playing surface:
- CP4907: SC6 burl design veneer

Body:
- Solid alder, approx. 30 x 30 x 50cm

Technology:
- 2 x 4 Snarestrings
- separately adjustable

Features:
